Q1 Games:

1.

2.

nodes 15, 7 can be pruned from the game tree above through alpha-beta pruning.

3.

4. No nodes can be pruned, because there is no concept of "optimal play" by adversary, it is just unknown, and no matter ~~the~~ what we have seen so far, the content of unexplored children could change expectimax value remarkably.

Q2 CSPs: Trapped Pacman

1. Variables (X_i) Domains (or unary constraints)

X_1	{P}
X_2	{G, E}
X_3	{G, E}
X_4	{G, E}
X_5	{P}
X_6	{P, G, E}

Binary Constraints:

$X_2 \neq X_3$

$X_3 \neq X_4$

2.

X_1	P	G	E
X_2	P	G	E
X_3	P	G	E
X_4	P	G	E
X_5	P	G	E
X_6	P	G	E

3. According to MRV, X_1 and X_5 could be the first variables that the solver assign.

4. Solution#	1	2	3	4	5
X_1	P	P	P	P	P
X_2	E	G	G	G	E
X_3	G	E	G	G	G
X_4	E	G	G	E	G
X_5	P	P	P	P	P
X_6	G	G	G	G	G

Q3 CSPs:

a)

$$4 \times 4 \times 4 \times 4 \times 4 = 4^5 = 1024$$

∴ there are 1024 leaf nodes in the Generate and Test tree for the original problem.

b)

$$2 \times 3 \times 2 \times 2 \times 3 = 72$$

∴ there are 72 leaf nodes in the Generate and Test tree for the arc consistent problem
